

The LightBox (Onion Skin)

FlipPad's Lightbox lets you see any drawings you want whether they're before, after or beside the one you're drawing.

It works just like a traditional animation disc. When you open a drawing it automatically goes on top of the stack. When there are too many drawings the one on the bottom automatically falls off.

To do inbetweens, tap on the image before, then the image after, and then the one inbetween. For example: To add a drawing in frame 3, between frame 1 and frame 5, tap on frame 1 then frame 5 and then frame 3.

- Tap the LightBox icon to turn the LightBox on or off.
- Touch & Hold the icon to change the settings.
