The Pencil

When you draw with the Apple Pencil, line width is naturally controlled by pressure. But you can also set a min and max line width to help you keep your drawings consistent.

- Touch & Hold the Pencil to open the dialog.

The Puck can be positioned anywhere you want and will let you quickly adjust line width and darkness without opening a dialog.

- Drag the outer ring to move the puck
- Drag the center up & down to adjust the maximum line width
- Drag the center left & right to adjust opacity
