

The Xsheet

The Xsheet is the animator's timeline. It's vertical because that's how professional animators want it. So every row is a frame and every column is a level. Each level has 2 separate layers, ink (the lines) and paint (the colors). The background is on the right and the levels stack up to the left.

Images in the xsheet automatically hold through the following frames until there's a new image or until you stop the hold. The light gray line down the middle of a cel shows that the image above will be held through that frame.

- Tap the xsheet icon at the top to Hide or Show the xsheet.
- Drag the sheet handle left or right to show more or less of the xsheet.
- Tap any square (cel) to view or edit.
- Tap on a highlighted cel to see the pop-up a menu.
- Touch & hold any thumbnail to drag it to a new location.
- Tap any row number to see the composited frame.
- Tap the + or - at the bottom to add or delete frames.
